### **Project Idea**

#### **CeylonTourMate - Tourist Travel Agency Management System**

CeylonTourMate is an online travel management system designed for a Sri Lankan travel agency to help tourists easily explore, book, and customize travel packages. The system allows tourists to select from different package types such as Gold, Silver, and Platinum, which include accommodation, meals, transportation, destinations, and airport pickup/drop-off facilities.

Tourists can also customize their travel packages based on personal preferences, budget, and travel dates. The system automatically adjusts pricing according to seasons and provides options to select drivers with language skills and other special abilities.

For agency staff, CeylonTourMate enables managers to create and update packages, assign drivers, and manage bookings. The admin oversees the overall system, users, and reports.

By combining convenience, flexibility, and local experience, CeylonTourMate aims to enhance the travel experience for tourists while helping agencies efficiently manage their operations.
